LETTER OF TRANSMITTAL iii

PREFACE v

CHAPTER

I. SCIENTIFIC METHOD 1
The meaning of scientific method 3
Characteristics of scientific procedure 4
Steps in the scientific procedure 10
Possibilities and limitations of scientific method . 19

II. THE NATURE AND FUNCTIONS OF SUPERVISION 23
Nature of supervision 24
The functions of supervision—prior statements . . 27
Six major functions of supervision 32
Summary 37

III. HOW TO USE THE SCIENTIFIC METHOD IN THE ORGANIZATION OF SUPERVISION 39
Steps in organization for scientific supervision . . 40
Conditions essential to proper organization of supervision 42
Organization to improve qualitative methods . . 45
Organization to facilitate the use of quantitative methods 47
Organization to meet the needs of the system . . 49

IV. HOW TO USE THE SCIENTIFIC METHOD IN PLANNING THE SUPERVISORY PROGRAM AS A WHOLE 53
The importance of planning 54
Scientific planning of supervisory programs . . . 55

CHAPTER PAGE

Factors to be considered in making supervisory plans . . . 56
Characteristics of good supervisory programs . . . 59
Procedure in planning the program as a whole . . 62
Adaptation of procedure to situation 67

V. How to Use the Scientific Method in the Appraisal of Instruction 68
The meaning of appraisal 69
Appraisal of major outcomes of instruction 70
Objective tests as a mode of appraisal 73
School records as a mode of appraisal 79
Community response as a mode of appraisal . . . 85
Summary evaluation 89

VI. How to Use the Scientific Method in the Promotion of Teacher Growth 91
Steps in a program for promoting growth of teachers in service 92
Objectives in teacher growth 94
Collecting data for appraisal 96
Studying the products of learning 96
Planning the means by which to make the program effective 100
Meeting group needs 100
Helping the individual teacher 109

VII. How to Use the Scientific Method in Curriculum Studies 114
The use of the results of curriculum studies . . . 115
The direction of curriculum studies 118
Determining objectives 120
Determining the best methods for directing learning 125
Determining the content and activities of the curriculum 128
Determining when objectives may best be achieved 130

CHAPTER PAGE

VIII. How to Use the Scientific Method in the Preparation and Installation of Courses of Study 132
Relation between curriculum studies and courses of study 132
Ilustration of procedure used in building a course of study 133
Responsibility for preparing a course of study . . 137
Selection and definition of the problem 138
Adoption of the objectives for the school system . . 141
Selection of the activities to attain the objectives . . 142
Decision as to form course of study will take . . . 147
Actual writing of course and suggested activities 151
Try-out of activities in the classroom 152
Revision in the light of experimentation 153
Final editing of the course for the printer 153
Installation of course of study 154
Evaluation and appraisal 155

IX. How to Use the Scientific Method in the Selection and Preparation of Instructional Materials . . . 157
Selecting commercially prepared materials 159
Techniques of appraisal 161
Preparing local instructional aids 169
Standards of workmanship 173
Appraisal of locally prepared materials 175
Conclusion 176

Officers of the Department 178

List of Members 179
